

# HOW TO KEEP COOL WHILE MOOCHDOCKING

Another Success Story for SoftStartUp

## PROBLEM: ADRIAN CAN'T RUN HIS A/C WHILE MOOCHDOCKING

Adrian and his wife, Ruth, find themselves moochdock a lot. Whether they are at his sisters house, staying near friends, or visiting their daughter in Tampa, they need to have an A/C running in their RV. Because of the large amount of power needed to start their A/C, they could never find a power pole or house to give them enough power without blowing a circuit.

## SOLUTION: THE SOFTSTARTUP ALLOWS YOU TO START AND RUN YOUR A/C ON LESS POWER

Adrian was excited to learn that he can run his bedroom A/C while moochdocking at friends and family's houses.

The SoftStartUp not only allows him to stay cool while moochdocking but also run 2 A/Cs when at a 30-Amp only trailer park. Before using the SoftStartUP, he was unable to run 2 A/Cs on 30-Amps, so this product is a real game changer for Adrian.

He now has no limitations on where he can stay or sacrifice comfort no matter where he is.

## RESULT: THE SOFTSTARTUP STARTS AND RUNS ADRIAN'S A/C EASILY!

Adrian tested 2 set-ups with the SoftStartUp. He started and ran 2 A/Cs on a 30-amp power pole and started and ran 1 A/C on house power.

He was excited to learn that the SoftStartUp worked perfectly and he now has a low power solution to stay cool during the summer.

Adrian was very happy with the results and is excited to use the SoftStartUp next time he is moochdocking. "This product is a real home-run" said Adrian.
