

CAN'T START 2 A/CS ON 30 AMP PARK PEDESTAL?

Another Success Story for SoftStartUp

PROBLEM: CAN'T START 2 A/CS ON 30 AMP PARK PEDESTAL

When David is out exploring in his RV, he finds that a lot of parks only provides 30 amp service, while his rig is equipped for 50 amps. This limitation can become a serious issue, especially on hot days when you want to run multiple air conditioning units. Many RVers have faced the frustration of having their breakers trip when trying to start multiple AC units at once, leading to uncomfortable conditions and interrupted enjoyment of their outdoor adventures.

SOLUTION: SOFTSTARTUP ENABLES 50-AMP RIG TO RUN 2 A/CS ON 30-AMP PEDESTAL

For David, utilizing his 50-amp capability to the fullest was important - even when working with a 30-Amp power pedestal.

Fortunately, the **SoftStartUp** enables you to use a 30 amp service without tripping the breaker when starting multiple A/C units.

Plus, perfect for David, the **SoftStartUp** comes with a free 30 to 50 amp adapter, so he can still utilize all of his power even in a campground - starting 2 A/Cs.

RESULT: STAY COOL ON 30-AMP POWER POLES EVEN WITH 50-AMP RIGS

David's results were impressive. With **both air conditioning units running for several hours in summertime without tripping the breaker**, he was able to enjoy a comfortable environment even in 30-amp service areas.

Not only does this technology enhance his comfort, but it also provides him peace of mind.

No more worrying about power outages or uncomfortable heat; with SoftStartUp, David can focus on what truly matters –enjoying his adventures.
