

DOES YOUR RV TRIP APPLIANCE BREAKERS WHEN THE A/C TURNS ON?

Another Success Story for SoftStartUp

PROBLEM: JIM'S RV TRIPS APPLIANCE BREAKERS WHEN HIS A/C TURNS ON

When Jim uses his generator to power his A/C unit, all of the power is drawn to his A/C and his other appliances are tripped, shutting them off. Jim doesn't want to have to worry about his TV shutting down or wi-fi restarting every time his A/C turns on.

SOLUTION: SOFTSTARTUP REDUCES IN-RUSH CURRENT ON START UP AND STOPS APPLIANCE SHUT DOWN

The SoftStartUp is designed to start and run air conditioners with a generator.

By soft-starting the A/C, it gradually ramps up power, significantly **reducing the initial surge that typically causes generators to trip.**

In testing, Jim found that with the SoftStartUp installed, the **generator could handle the A/C startup without cutting off power** to his essential devices like the TV and Wi-Fi.

RESULT: JIM AND RHONDA ENJOY THEIR FAVORITE TV SHOW IN COOL COMFORT

The results were remarkable. With the SoftStartUp in place, **Jim was able to run his air conditioner while keeping all other electronics powered up.**

No more annoying resets or loss of connectivity. Now they can stream their favorite television shows, utilizing the TV and the wi-fi without tripping breakers.

Plus, the **plug-and-play unit eliminates the need for complicated roof access or costly permanent installations.** Best of all, it's portable, so it can be easily transferred to a new rig whenever needed.
