

# FRUSTRATED OVER TRIPPING BREAKERS WHILE MOOCHDOCKING?

Another Success Story for SoftStartUp

## PROBLEM: RVERS FRUSTRATED OVER TRIPPING BREAKERS WHILE MOOCHDOCKING

When Matt and Laurie were moochdocking for three months at a family member's home, they found that when the A/Cs turned on, it shut off their other appliances. Staying in their RV with limited power—only 15 amps available for their 50 amp rig—meant that running high-demand appliances like air conditioning, a coffee maker, and a water distiller often pushed the system over the edge.

## SOLUTION: THE SOFTSTARTUP PUTS AN END TO BREAKER TRIPS

The plug-and-play solution allowed Matt and Laurie to significantly **reduce the power required to start and run their air conditioning units.**

This made it possible for Matt and Laurie to **operate their AC without tripping the breakers** and shutting off other appliances like the wi-fi or TV.

They also discovered that this device would be invaluable for future boondocking trips, **allowing them to run 2 AC units on smaller generators without hassle.**

## RESULT: LAURIE STAYS COOL AND CONNECTED WHILE WORKING IN HER RV

With the SoftStartUp installed, Matt and Laurie enjoy a comfortable RV experience without the constant worry of losing power to their essential devices.

Matt and Laurie's ability to **run air conditioning, a water distiller, and coffee maker** simultaneously not only enhanced their living situation but also supported the work-from-home needs of Laurie, who could now stay connected without interruption.

Laurie now no longer has to sacrifice running her A/C when she needs to use the internet, or any other task she may need to do.
