

# CAN'T START 2 A/Cs ON A SMALL GENERATOR?

Another Success Story for SoftStartUp

## PROBLEM: RV OWNER CAN'T START 2 A/Cs ON A SMALL GENERATOR

Thomas & Melissa Baity have struggled to start up their 2 A/Cs on their inverter generator setup. With the surge in power during the A/C startup, there was too much stress put on the compressor. This prevented Thomas & Melissa from staying cool in their RV over the summer.

## SOLUTION: SOFTSTARTUP STARTED 2 A/Cs ON A 3000 WATT INVERTER GENERATOR

Thomas turned to the plug and play SoftStartUp by SoftStartUSA. This innovative device reduces the initial power surge when starting up air conditioners, making it easier to manage power demands.

During a live test, they connected their RV to a **3000-watt Champion generator**. They were able to start and run both A/Cs.

With excitement and satisfaction, Thomas said, **“We were able to start both of our air conditioners—our living room, which is a 15,000 BTU, and our bedroom, which is 13,500 BTU air conditioner—on our Champion 3000 Watt inverter generator.”**

## RESULT: SUCCESS! THIS COUPLE STAYS HAPPY AND COOL THROUGHOUT THEIR RV

The soft start technology allowed Thomas and Melissa to start and run both air conditioners without tripping any breakers.

Given the generator’s age and extensive use, this was a significant achievement. **“That’s what I would call a successful test!”**, said Thomas. With the SoftStartUp, life in the RV is comfortable and cool.

Additionally, Thomas loves the flexibility of the SoftStartUp, saying, **“It’s portable. You can take it with you if you move to a different RV,”** making it a smart, long-term investment for RV owners.
