

# STAY COOL AND STRESS FREE IN YOUR RV WHILE BOONDOCKING

Another Success Story for SoftStartUp

## PROBLEM: TRIPPING BREAKERS AND BLOWING FUSES

For RV enthusiasts like Dave and Jacqueline, starting up your air conditioner often means dealing with a significant power surge. This sudden demand can trip breakers, cause strain on their system, and even limit their ability to run multiple appliances simultaneously. If Dave and Jacqueline are boondocking or relying on a generator, the problem intensifies, as the high power draw can overload their system or blow fuses.

## SOLUTION: PLUG-AND-PLAY SOFTSTARTUP BY SOFTSTARTUSA

Soft Start USA has unveiled a groundbreaking solution: a plug-and-play soft start device.

This device gradually ramps up the power needed to start Dave and Jacqueline's AC, **reducing the strain on their system without requiring any complicated installation.**

Here's why it's a game-changer: **there's no wiring, no tools—just plug it into your RV's power pedestal.** It includes thermal protection, and is ideal for boondocking, it allows two ACs to run on a 3,000-watt generator without blowing fuses.

## RESULT: STRESS-FREE A/C USE AND POWER MANAGEMENT

With this innovative device, Dave and Jacqueline can finally **enjoy a seamless AC startup** without worrying about power surges or complicated installations.

Whether they're parked at a campsite or boondocking in the wilderness, the plug-and-play soft start allows them to **run their AC confidently on a generator, use multiple appliances simultaneously without tripping breakers** and enjoy a hassle-free, tool-free setup process.

"This is awesome." said Dave, excitedly.
