

MAXIMIZE COMFORT AND LIMIT POWER SURGES WITH SOFTSTARTUP

Another Success Story for SoftStartUp

PROBLEM: DON'S COMFORT IS CHALLENGED BY POWER SURGES

RV enthusiasts like Don, often face challenges with power management, particularly when dealing with limited hookups like 30-amp plugs or household outlets. A lot of Don's RV friends moochdock on their house when visiting, but the house amperage cannot support their RV power. Don also struggles to run his essential appliances when in his 25 ft leisure travel van with a single 15 BTU air conditioner.

SOLUTION: THE SOFT STARTUP - QUIET, EFFICIENT, AND EASY-TO-USE

The SoftStartUp solves these challenges with a plug-and-play design that **eliminates the need for complicated roof installations.**

It **reduces power demands during startup**, allowing Don or his RV friends to run an AC unit or even two ACs on a 30-amp plug **without tripping breakers.**

It works seamlessly with household outlets, generators, and even 15-amp connections, enabling flexibility in various camping scenarios.

RESULT: COOLER, QUIETER, AND SMARTER RVING

The Soft Startup offers a hassle-free way to stay cool, conserve energy, and enjoy a quieter RV experience.

Whether Don is running two ACs on a 30-amp hookup, camping off-grid with a generator, or plugging into a household outlet during a family visit, the SoftStartUp ensures him a reliable performance and greater comfort.

As Don aptly put it, the quieter operation alone is "worth the price of admission."
