

# MANAGE YOUR POWER & MAXIMIZE COMFORT WITH SOFTSTARTUP

Another Success Story for SoftStartUp

## PROBLEM: GREG'S A/C HAS HIGH ENERGY DEMAND

When Greg and his family are camping or traveling with their RV, managing power demand can be a challenge, especially in situations with limited power supply, like a 30-amp hookup, standard outlets at family homes, or while moochdocking. Traditional setups often result in tripped breakers when running multiple devices or even a single A/C on a low-amp connection.

## SOLUTION: THE PORTABLE PLUG-N-PLAY SOFTSTARTER

Greg installed the SoftStartUp, designed for seamless portability and easy installation. Unlike other soft starters, which require a roof installation with rewiring, the **SoftStartUp plugged straight into Greg's RV.**

The plug-and-play design eliminates the need for technical installation. The 50-amp version, compatible with both 30- and 50-amp systems, even includes an adapter for added flexibility.

Soft Startup decreases energy demands across all connected devices by about 50%, and makes it ideal for RVers, like Greg, juggling high energy demand from appliances like microwaves, TVs, electric water heaters, and multiple AC units.

## RESULT: GREG'S RV A/C RUNS SMOOTHLY

Using the SoftStartUp, Greg successfully ran two A/C units on a 50-amp connection alongside other high-demand appliances without tripping the breaker.

On a 30-amp connection, he managed to run one A/C, a microwave, and other devices with careful energy management. The SoftStartUp bridges the gap between ease of use and advanced energy efficiency for RV owners like Greg.

Its portable design and compatibility with various power setups make it a must-have for any RV enthusiast looking to maximize power options while avoiding the limitations of traditional systems. Now Greg and his family can travel anywhere with maximum comfort.
