

WORRY-FREE BOONDOCKING ALLOWS JEFF TO EXPLORE NEW PLACES

Another Success Story for SoftStartUp

PROBLEM: JEFF STRUGGLES TO MANAGE POWER FOR HIS CUSTOM RV BUILD

When Jeff decided to embark on the adventure of designing and building his dream RV, he knew it would be a challenge—but also worth it. Starting with a custom-ordered empty shell from Turtle Top, Jeff meticulously built a 29-foot mobile haven to suit his and his wife's needs. However, Jeff ran into a significant hurdle during the process: managing power consumption. The power surges and breaker trips from running multiple devices simultaneously became a frustrating issue.

SOLUTION: THE SOFTSTARTUP HELPS JEFF ENJOY WORRY FREE TRIPS WITHOUT TRIPPING BREAKERS

Instead of purchasing a new generator, Jeff discovered a more innovative solution: **the SoftStartUp**.

Intrigued by its promise to **reduce startup power demands and smooth out power usage**, Jeff researched the product and reached out to an experienced installer in Arizona.

The installer shared firsthand insights: SoftStartUp not only **eased the initial power surge** when starting AC units but also **reduced overall power consumption while running**.

RESULT: A SMOOTH AND RELIABLE BOONDOCKING EXPERIENCE

With the SoftStartUp installed, Jeff transformed his RV experience. His custom-built rig **now operates flawlessly**, whether he's plugging into shore power or relying on his generator during off-grid adventures.

The reduced amperage draw ensures that all his devices work harmoniously, **with no risk of overloads or surges**.

Jeff especially appreciated how **the SoftStartUp allowed him to fully enjoy the freedom of boondocking**, confidently chasing cooler temperatures in the summer.
