

# CAN'T KEEP COOL WHILE BONDOCKING?

Another Success Story for SoftStartUp

## PROBLEM: MATT AND LAURIE CAN'T KEEP COOL WHILE BOONDOCKING

For Matt and Laurie, boondocking is an incredible way to enjoy off-grid camping, but extreme heat presents a significant challenge for them. They recently faced this issue when temperatures soared, and they couldn't run our AC units because they were relying solely on a generator. This made it nearly impossible to stay comfortable or productive during the hottest hours of the day.

## SOLUTION: INSTALLING A SOFTSTARTUP

After experiencing the discomfort of a sweltering RV, they discovered a simple but **game-changing solution**: the SoftStartUp.

The SoftStartUp allows Matt and Laurie's generator to **start and run their A/C units by reducing the surge of electricity** required to start the compressor.

This means **they can run their air conditioning even while boondocking**, without overloading the power source.

## RESULT: COMFORT AND PRODUCTIVITY RESTORED

If Matt and Laurie had installed the SoftStartUp earlier, their experience would have been completely different.

During peak heat hours, they could have run their generator with the SoftStartUp, **keeping the AC units operational and the RV cool.**

This would have saved them from retreating to a coffee shop and allowed them to **comfortably stay and work in their own space.**
